Lucknow

Theme- Water scarcity

Objective-: At different places of an area “Water Supplying Units” will be introduced, where very simple water purifying units will be placed, which will be very effective and thus making the atmosphere of our societies peaceful and nourishing

Need of the project-: Impurity of water is not a thing to be thought by the citizens of rural areas; though these are the people of urban areas who make up 40% of India’s population are watching and facing this challenge like a daily soap. So focusing on the urban people and people of lower and middle classes who can’t afford things like bore well, I’m putting forward my idea, and this initiative is not a thing which will have no affect after a short period this will be with the peoples for a long period of time

How you will achieve it-

- (1) Interacting with the citizens of the area that to make sure that are they ready to make us them introduce our initiative.
- (2) Application of WSU and the working panels in it in that area.
- (3) Supplying the purified water to the houses of the people of that area, and asking them that are they satisfied with our work.
