

Action Project of Yuva Paryavaran Leader Students

Anusha Tomar, 11th std
Delhi Public School
Greater Noida

Theme: Waste management

Objective: To reduce the use of circulars that is used to notify students and parents, and thus cutting down the paper used by the school.

Need of the Project: The paper used in printing the circulars is useless once the concerned person reads it. But it cannot be recycled because sometimes it is too small, so people do not bother. Also, these circulars are mainly meant for the parents and sometimes children do not convey the message properly. Using e-mails and SMS will be highly beneficial not only for the environment but also the parents

How it will be achieved: Use of SMS instead of conveying messages through printed papers. We already have a system in place which sends SMS to parents to convey messages after school hours. The plan is to extend it to all types of notifications, especially like “On account of x tomorrow is holiday for...”

If successful, we can further extend the project to convey messages to teachers in the school. Hence, cutting down the salary of the person who carries a register to every teacher to convey the message.

Additionally, on the basis of a survey result, we would conduct an activity in which the students will be required to plant a tree in their society or in the school (or nearby area) for every 30 circulars they get.
