

Action Project of Yuva Paryavaran Leader Students

Divyanshu Jaiswal, 11th std
Shree Mahaprabhu Public school
Allahabad

Theme- Greening and biodiversity

Objective- The goals and objective of my project is to make a fresh, clean, pollution free environment

Need of the project- The needs of this project is very important because now this is the time to aware the people to control and stop the pollution. Because the time is not so far when environment will be destroyed. Rivers of India such as Ganga, Yamuna, Satluj, Kaveri, Narmada are most polluted river in India. We may help our environment and help in reducing pollution to great extent by paying attention to some important points in our daily routine.

In daily routine, we do waste lots of stuff like paper, Plastics and even water, Instead of throwing those waste in trash categories them into recyclable and non recyclable product and send those product to write full place like recyclable waste to recycling company and non Recyclable waste to proper dumping Area (uncleanness is also create a pollution). Avoid wasting useful products to waste, Instead of throwing waste water Recycle waste water for other purposes like watering garden.

How you will achieve it-

- 1) Motivating the residents of the locality to do less pollution.
- 2) Teach about pollution through seminars in school.
- 3) Speech will be delivered by the students for making clean and green earth.
- 4) Poster making and slogan writing competitions.
