Theme- Water stagnation

Objective- To resolve the issue of water stagnation in school campus and aware the rural people about the problems created by the water stagnation.

Need of the project- During the rainy season, the rain water gets accumulated in the school campus. The stagnant water becomes the breeding ground for various disease causing agents and can cause diseases to the students of the school.

How you will achieve it-

- 1) By making proper drainage system in the school campus so that the water does not get accumulated.
- 2) By raising the level of ground.
- 3) Making rural people aware of the menace caused by the stagnant water.
