

Action Project of Yuva Paryavaran Leader Students

Navya Malik, 11th std
The Millennium School
Lucknow

Theme- Waste management

Objective- The major goals and objectives I plan to achieve are increase in garbage management and proper sanitation in the city. I would focus on sending the garbage for recycling or maybe converting it into manure by using the vermicompost method and from the undegradable waste I could encourage the use of plastic to use it in building roads. Also an effort to increase awareness amongst people on usage of public toilets and 'sulabh shauchalayas' and an effort to aware the people who manage those toilets on how proper cleanliness and hygiene is so very important.

Need of the project- This project of mine is a concern towards nurturing and protecting what is right and what needs to be protected in our nature and a strong step towards what should be eliminated from our society to make it clean and green and foster its natural beauty. The main need for my project will be some attention and concern from the side of public and common people in our city. My project will concern mainly on the given topics and will cover the topics extensively. By this project many people will be benefitted like mainly the common people and the public whom we might be able to inspire to fight for what is right and do what is right for everyone without harming the environment then the authorities whose work would be reduced and majorly ourselves who would be indebted to working for the preservation of good things and curbing the bad ones. This is a conscience and well worked upon effort and the major part for the sustainability of this effort would not be without help and guidance of the common people who would help us by sharing their problems and the authorities.

How you will achieve it- Altogether the main focus and concern of this whole project would be on garbage disposal and proper sanitation but also look after other aspects of the environment that too keeping in mind its pros and cons. Also I would focus on the different measures I mentioned previously in this action plan and would spread as much awareness I can and would put in all my effort at the level which we are given as being a citizen we are a bit bound by limitations. But with all my effort I would do as much as possible to curb all the things which are an obstacle in making our city the best. With all this in mind I have certain activities to work upon so as to achieve my goal this includes firstly spreading awareness, distributing brochures, making power point presentations, door-to-door awareness and information imparting, doing different such activities.
