

Action Project of Yuva Paryavaran Leader Students

Pooja Tripathi, 8th std
T.D Girls Inter College
Lucknow

Theme- Waste management

Objective- To minimize the usage of polythene

Need of the project- Polythene is a menace which does not decompose if buried; it produces toxic gases when burnt. It is a non biodegradable material that is being used by all of us in large numbers daily. Women throw their household waste in polythene which when ate by animals like cows, gets deposited in their stomach and they die.

How you will achieve it-

I will make the students of my school, aware about the harmful effects of polybags.

I will educate the people to reuse and recycle the polythene and do not throw it or burn it.

I will be promoting usage of jute bags instead of polythene bags.
