

Action Project of Yuva Paryavaran Leader Students

Shivangi Mishra, 9th std
La Martiniere Girls' College
Lucknow

Theme- Lifestyle and environment

Objective- To minimize usage of deodorants and promote organic soaps and 'itra'.

Need of the project- Today's generation thinks the coolest thing to do is spray deodorants on your body!

Unfortunately, they aren't aware of the harm these little bottles filled by gas and liquid are doing to us. Deodorants are depleting the ozone layer. It is a Chlorofluorocarbon which is destroying the protective ozone layer. The ozone layer is extremely important for the survival of human beings as it helps protect the harmful Ultraviolet Rays (U.V) of the sun from entering the earth's surface. The U.V rays are extremely dangerous and their effect can be fatal to man. In fact, it has been fatal to man. It has caused skin cancer and other such innumerable diseases. So you see, it's a Chain beginning from deodorants and ending at death.

How you will achieve it-

- 1) I would like to conduct this project to educate the people of this dangerous liquid which they apply as fragrant on their bodies so frequently. We will tell the children not to use deodorants and not waste their pocket money on such a harmful thing. We will educate them on hygienic issues of taking a bath regularly instead of using deodorants and harming the environment.
- 2) Also, we will conduct an experiment in which we will make an organic soap which will have a natural fragrance so that the students can use them in place of these deo's.
- 3) The children will also learn how to conserve the natural resources and also learn about the problems that are increasing day by day.
- 4) They will enjoy making the soap which will grow their interest in environmental issues, thus, making them alert and co-operative.
- 5) We will also take the children to a skin cancer treatment area and ask them to help the people who have been suffering from the disease.
- 6) The children can give names to the soaps they have created and we can sell them in our school fete thus encouraging the people to become Eco-friendly. The money earned by this can be given to the patients as well.
