

Action Project of Yuva Paryavaran Leader Students

Vaibhav Pathak, 9th std
Delhi Public School
Etawah

Theme- Water and Sanitation

Objective- To make the surrounding clean.

Need of the project- As mentioned here are no roads, due to this electric poles are also not fitted. We use very long electric wires moving through fields to the electric poles 400metres away from our locality. Colonial peoples use to domesticate animals like cows and buffaloes. During rains, sometimes the wires may broken and get detached and sometimes the animals die due to electric shock.

How you will achieve it—

- 1) I will go to every house and collect all citizens of our society with help of my friends and inform them about our problems and will take their suggestions and other problems of our society.
- 2) I will write and send an application to Municipal committee.
- 3) If the committee will not do anything then we will send an application to **D.M** of our city.
- 4) Then may be our problem will solve.
- 5) First day of construction; Ten days for starting construction. Engineer will come to our colony to see it, we will tell our problems and conditions and necessity of the citizens.
- 6) I will say “ Sometime garbage get deposited in the drains and result in blockage of drains so the width of drains must be larger and to remove the mosquitoes colony in drains you should cover it which will result in increasing of width of road.”
- 7) As sometimes masons do not work properly. We will watch them and tell them what exactly we want.
- 8) Water pipelines must be good and electric poles must be strong and wires must be covered by insulators (as using by government these days).
